

Air pollution

By Andrew Lozano

Cars release a really bad gas,
Which can destroy our lungs very fast.
It makes us cough and get really sick,
This can become serious pretty quick.
It actually causes our climate to change,
By affecting the ozone I know it sounds strange.
Sulfur dioxide is another problem you see,
It causes acid rain,destroying your favorite tree.
It also harms our soil,making things hard to grow,
It can be very harmful to animals,did you know?
What's the solution
To solve air pollution?
It's possible you see
Here's my recipe:
Go ride a bike
Take a bike
Drive in one car
Walk if its not far
Take the bus,train or "L"
Even though it may smell.
Use your imagination,it's fun,
You'll find a way to get the job done.
Transportation soils the air,
Show Mother nature that you care
There's lots of bad things that pollution will do
Preventing this problem is up to me and you
