

PROS & CONS OF DIFFERENT AIR QUALITY SENSORS

Bourns College of Engineering - Center for Environmental Research and Technology

CE-CERT has been using a variety of sensors working with the community over the last several years, and we. This is a summary of the pros and cons we have observed with the sensors, it is not comprehensive or to be used to compare the accuracy of the sensors; it is merely our observations and what has guided our decision making for purchasing sensors for different applications. We will be updating this sheet regularly with new information. For a quantitative assessment of the performance of the sensors, visit [AQSPEC](#).

Low-Cost Sensors

Low cost air quality sensors are cheaper than government-used sensors, thus making them available for individual citizens and neighborhoods to purchase and use for themselves. They are generally flash memory or cloud-based and are able to record real-time data on air quality parameters. Here are some to name a few.

SENSOR	PRO	CON
PurpleAir sensor	<ul style="list-style-type: none"> ❖ Public online cloud-based map. ❖ Connects to wi-fi ❖ Cost is around \$250, one time fee ❖ Usually decently accurate for up to 2 years if calibrated 	<ul style="list-style-type: none"> ❖ Must be connected to a power source
Clarity sensor	<ul style="list-style-type: none"> ❖ Solar rechargeable ❖ Connects to wi-fi ❖ Internal battery ❖ Usually decently accurate for up to 2 years if calibrated 	<ul style="list-style-type: none"> ❖ Private online cloud-based map. ❖ Cost can approach \$1000 per year, subscription basis
<i>DIY sensor</i> – Raspberry Pi Sensor	<ul style="list-style-type: none"> ❖ Learn individual parts of an air quality sensor 	<ul style="list-style-type: none"> ❖ Not calibrated (designed only for qualitative use) ❖ Requires initial coding
<i>DIY sensor</i> – Smart Citizen Kit	<ul style="list-style-type: none"> ❖ Learn individual parts of an air quality sensor ❖ Very easy to assemble ❖ Low Cost, ~\$100 ❖ Interactive website 	<ul style="list-style-type: none"> ❖ Not calibrated (designed only for qualitative use)
